Control of Gene Expression in Prokaryotes Flashcards | Quizlet

Prokaryotes regulate gene expression (and therefore their metabolism) almost entirely by regulating transcription. The lack of a nucleus makes this very efficient. Eukaryotes regulate gene expression (and therefore their metabolism) at every step of protein synthesis from pre-transcription to post-translation.

Control of Gene Expression in Prokaryotes POGIL Notes ...

To understand how gene expression is regulated, we must first understand how a gene codes for a functional protein in a cell. The process occurs in both prokaryotic and eukaryotic cells, just in slightly different manners. Prokaryotic organisms are single-celled organisms that lack a defined nucleus; therefore, their DNA floats freely within ...
