Molluscs form a major group of organisms that makes-up an integral part of mangrove ecosystems. A study, carried out in 8 mangrove areas of Mumbai, west coast of India, from August 2015 to May 2016, revealed a distribution of 61 molluscan species, represented by 46 gastropods, 14 bivalves and 1 polyplacophora.

the ...

Molluscs were collected in mangrove swamps in several parts of the Indo-West-Pacific, West Africa, and the West Indies (see Table 1). Observations were made of substratum, orientation, and shore level of occurrence of each species. The micro-molluscs of algal mats on mangrove roots (see e.g., Robertson, 1960) were not well

family level. We found 126 individuals belonging to 21 species, 15 families and two classes of molluscs among the infauna. Of the 15 families recorded, the family Lucinidae was registered only in the Buenos Aires Creek.

Patterns of mollusc distribution in mangroves from the São ...

Inshore mollusc and crustacean fisheries Certain mollusc and crustaceans caught in mangroves generate quite high market values, and although they may still be harvested at local and small-scales, in many cases fishers are operating a targeted fishery and generating income through market sales.

The Role of Mangroves in Fisheries Enhancement

The present study aims to identify relationship between the structural and ecological characteristics of mangrove ecosystem and mollusc communities. Bivalve and gastropod are considered

as the main molluscs of mangrove forests and often show marked zonation patterns both horizontally and vertically.

Effect of mangroves on distribution, diversity and ...

The gastropod assemblage found in a 9-year old mangrove plantation differed from natural mangrove associations in that the former is dominated by opportunistic eurybiotic gastropod species. This could mean that the ecosystem of planted mangroves is unbalanced and is still in a transitional state.

MOLLUSKS IN THE MANGROVE REHABILITATION AREAS IN WESTERN ...

Mollusca is the second-largest phylum of invertebrate animals after the Arthropoda. The members are known as molluscs or mollusks (/ ' m ɒ l ə s k /). Around 85,000 extant species of molluscs are recognized. The number of fossil species is estimated between 60,000 and 100,000 additional species. The proportion of undescribed species is very high.

Mollusca - Wikipedia

This study investigated the occurrence of bisphenol A (BPA), atrazine and selected pharmaceutically active compounds (PhACs) in mangrove habitats in Singapore in 2012–2013, using multiple tools (sediment sampling, POCIS and filter feeder molluscs). Using POCIS, the same suite of contaminants (atrazine, BPA and eleven PhACs) was detected in mangrove
