## **pH Properties of Buffer Solutions**

A buffer solution is an aqueous solution consisting of a mixture of a weak acid and its conjugate base, or vice versa. Its pH changes very little when a small amount of strong acid or base is added to it. Buffer solutions are used as a means of keeping pH at a nearly constant value in a wide variety of

## Read PDF Ph Properties Of Buffer Solutions Answers

Buffers are defined as solutions which resist small change in pH by adding small amount of acid or base. A buffer usually consists of a weak acid and its salt (for eg, acetic acid and sodium acetate) or a weak base and its salt (for eg, ammonium hydroxide and ammonium chloride). Mechanism of buffer action:  $\text{CH}_3\text{COOH} \rightleftharpoons \text{CH}_3\text{COO}^- + \text{H}^+$
